References on Candy Making
and Sources of Equipment and Materials

* Agricultural Chemical Research Division
Bureau of Agricultural and Industrial Chemistry
Agricultural Research Administration
U. S. Department of Agriculture

The Department of Agriculture is frequently requested to furnish information on candy making or the preparation and handling of ingredients which are commonly used by the industry. Since it has not issued publications relating to these subjects, this circular has been prepared to serve as a guide for prospective and established candy makers to sources of information. It contains lists of references to books and trade journals, together with the names of a number of manufacturers and suppliers of equipment and materials. This circular is intended as a means of presenting a larger amount of information than could be included in a letter. It is hoped that it will be of some assistance in obtaining general and detailed information relative to the industry.
